Situation Report # 3 on Flood (2015) affected areas of Northern-Sindh

(August 03, 2015)

Introduction:

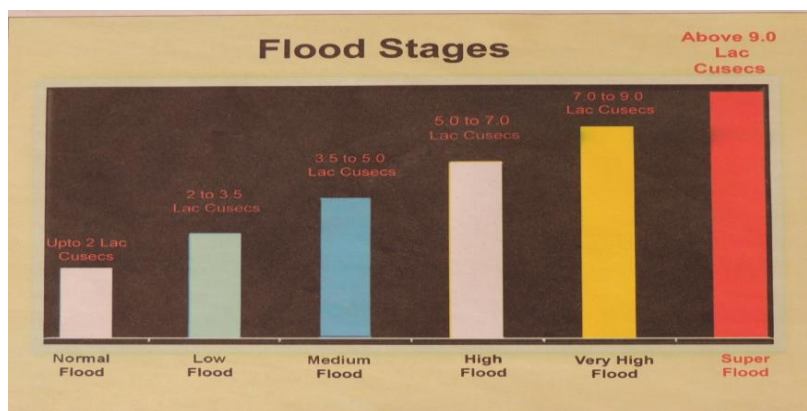

Monsoon in Pakistan generally penetrates from July to September (One Quarter) and produces widespread rains. While on the other side, early melting of snow and outburst of glacial lakes caused the riverine flooding in Sindh through Indus River and widespread rains with thunderstorms producing rainfall flooding in many areas of Sindh Province. At the present, the northern districts of Sindh province experiencing high level of flooding in Indus River. Regarding recent floods the PMD, PDMA and flood forecasting division Lahore already issued alerts/warnings to make all possible precautionary measures to avoid any unwanted situation in any area of Pakistan in result of floods.

The current flood situation report of northern districts of Sindh province where SRSO has been working over the period of 12 years, briefly provides the information with respect to the flood conditions prevailing in these northern districts particularly in kacha areas during the floods respectively. Report also highlights a quick view of possible support required and threats which may have adverse effects if the measures are not placed in recent perspectives. The district wise brief overview of current situation prevailing given as under:

The recent flood situation at Guddu and Sukkur Barrages:

At present, over 730,000 cusecs of water flows at the Guddu barrage. The downstream upgraded to Sukkur barrage is bracing for the brunt of a very high flood level, the situation of water level increasing gradually at both the barrages. According to latest Meteorological and Hydrological conditions observed by Flood Forecasting Division Lahore, Indus River at Sukkur has attained high flood level ranging between 650,000 cusecs to 750,000 cusecs during the period from 1200 PST of August 3, 2015 to 2400PST of August 5, 2015. However the mighty Indus would continue to remain in high flood level further seven days, FFD added. The National Disaster Management Authority (NDMA) said that so far people of Kacha areas are affected by the floods.

Classification of Flood level (flow of water in cusecs):
